

ACOUSTIC SOLUTIONS

Acoustic drop panels are architectural elements designed to enhance the acoustic performance of a space by reducing noise, improving speech intelligibility, and minimizing echoes and reverberation. Deployed to control excessive sound reflections and create a more comfortable acoustic environment.

envi ACOUSTIC SOLUTION

- 2x2 sound absorbing panels available in 2", 4" and 6" drop heights
- Designed for 15/16" and 9/16" grid ceilings
- Class A flame rating
- Wide array of color options allows you to fully customize any space
- Pair acoustic drop panels with envi designer panel fixtures to envision a new way to transform your space

NRC - NOISE REDUCTION COEFFICIENT

NRC stands for Noise Reduction Coefficient, indicating the measure of an Acoustic Drop Panels ability to absorb sound and reduce noise within a space. The rating typically ranges from 0 to 1. Higher values indicate better sound absorption.

BENEFITS

- Increase work efficiency
- Increase comfort for occupants
- Increase sound quality
- Decrease noise levels
- Decrease sound reverberation
- Decrease distractions
